Collisions of matter-wave solitons : Nature Physics : Nature . Solitons and Nonlinear Wave Equations In optics, the term soliton is used to refer to any optical field that does not change during propagation because of a delicate balance between nonlinear and linear effects in the medium. There are two main kinds of solitons: spatial solitons: the nonlinear effect can balance the diffraction. Chaos, Solitons & Fractals - ScienceDirect.com In mathematics and physics, a soliton is a self-reinforcing solitary wave (a wave packet or pulse) that maintains its shape while it propagates at a constant velocity. Solitons are caused by a cancellation of nonlinear and dispersive effects in the medium. Nonlinear waves: Solitons 14 Mar 2012 .
